

Contractor Management Platform

Quote → schedule → crew time → invoice → paid
Live profit on every job.

Two Iron builds software for trades. Our contractor platform was forged on the floor of a working Ontario electrical company — and it runs the whole job lifecycle so nothing slips between the quote and the cheque. No more spreadsheets, paper timesheets, or year-end guesswork.

What it does

Fast Quoting

Build quotes by tapping price-book items, grouped by room/area. JIC, admin, small-parts and permit fees plus HST calculate automatically. Send a branded client letter prospects accept or decline from a link — no login, no per-item pricing exposed.

Jobs & Scheduling

Accepting a quote auto-creates the job and invoice. Assign crew, track status, and see the week ahead in a 7-day schedule with a “needs scheduling” queue.

Invoicing & Payments

Net-15 terms (configurable), PDF invoices, payment tracking, and automatic email reminders to clients on due and overdue dates.

Crew Portal

Techs log hours and mileage against their own jobs from any phone (installable app). Admins review and approve — crews never see financials or other crews' data.

Real-Time Margins

Every job shows live profit: revenue – labor (hrs × wage) – mileage (km × rate) – parts. Know which jobs make money while they're running.

Year-End Reporting

Cash-basis financials by payment date, HST summary, and payment-method breakdown — export-ready for your accountant.

Why contractors choose it

- **One system, whole lifecycle** — quote to cash, nothing falls through
- **Profit visibility** — margins per job, not a year-end surprise
- **Professional client experience** — branded quotes & invoices
- **Mobile-first for the field** — crew logs time on-site
- **Database-level security** — admin / office / tech roles enforced in the DB
- **Invite-only** — you control exactly who gets in

Built for your brand

Every contractor gets their own **logo, company name, brand color, and custom domain** (e.g. quotes.yourcompany.com). Your customers see *your* business. Fees, HST rate, mileage rate, and invoice terms are all configurable per company.

PROVEN IN THE FIELD

The platform powers **Swift Electric** — an Ontario electrical contractor running its full quoting, scheduling, crew time, and invoicing on Two Iron every day. Battle-tested on real jobs, not a demo. Built for one contractor, ready for the next.

Under the hood

Modern, reliable, and secure: **Next.js + Supabase (Postgres)**, row-level security for true multi-tenant isolation, Google sign-in, and an installable progressive web app. Automated email reminders and optional voice-to-quote input.

Two Iron — software for trades. Ready in days, not months.
